

Sidhant Chandrakar

+91-6266423758 — sidhantchandrakar02@gmail.com — [GitHub](#)

Professional Summary

Motivated and detail-oriented student with interests in networks and software development. Strong problem-solving skills with experience in programming, system design, and academic projects. Seeking opportunities to apply technical knowledge in practical environments.

Education

Visvesvaraya National Institute of Technology (VNIT)

M.Tech Computer Science and Engineering

CGPA: 8.73

Nagpur, Maharashtra

2025 – 2027

Chhattisgarh Swami Vivekanand Technical University

B.Tech Information Technology

CGPA: 8.38

Bhilai, Chhattisgarh

2020 – 2024

Technical Skills

- **Programming Languages:** C, C++, Python
- **Tools:** Git, Linux, Docker, VS Code
- **Networking:** Mininet, P4, BMv2, Wireshark
- **Databases:** Oracle, Amazon Redshift, Cassandra

Projects

Hyspectral Image Classification

2026

GitHub Repository: [SidhatChandrakar/Hyspectral_Image_Classification](#)

- Designed a novel HSI classification architecture using parallel spectral-spatial feature extraction and Bidirectional MamTrans.
- Implemented dynamic token compression to reduce redundant tokens, improving training and inference efficiency.
- Developed and evaluated the model in PyTorch on benchmark hyperspectral datasets for remote sensing classification.

P4-Based DDoS Detection System

2026

GitHub Repository: [SidhatChandrakar/P4_based_DDOS_Detection](#)

- Designed a programmable data-plane security prototype using **P4**, **Mininet**, and **BMv2** to monitor live traffic and detect abnormal packet bursts at the switch level.
- Implemented **flow-level packet counting**, **header parsing**, and **threshold-based anomaly detection** to identify DDoS-like traffic patterns before they reached the victim host.
- Used the **controller** to analyze switch-generated summaries and install mitigation rules, demonstrating how in-network processing reduces the delay and overhead of traditional software-based defenses.

Student Management System

2026

GitHub Repository: [SidhatChandrakar/Student-Management-System](#)

- Developed a web-based application to **store, update, search, and manage student records**, reducing manual effort in academic data handling.
- Used **Python**, **HTML**, **CSS**, and a **database backend** to implement secure CRUD operations and maintain structured student information efficiently.
- Built the system to improve **data organization, accessibility, and administrative workflow**, making student record management faster and more reliable.
